EDUCATION

Stonehill College

Bachelor of Science in Computer Science, Minor in Mathematics

North Easton, MA

Aug. 2022 – May 2026

TECHNICAL SKILLS

Languages & Developer Tools: Python, Java, C/C++, JavaScript, HTML/CSS, R, Vercel, Git, Docker, Jenkins

Frameworks & Libraries: React, Node.js, Flask, Django, FastAPI, LangChain, HuggingFace, Polars

Databases & Cloud Platforms: SQL (Postgres), MongoDB, Vertica, Supabase, AWS S3

Concepts: Agile, APIs, Databases, LLMs + RAG, Automated Workflows, Network Security (CCNA)

EXPERIENCE

Software Engineer Intern

May 2025 – May 2026

Cisco

Atlanta, GA

- Accelerated engineering productivity by reducing analysis of security rules used to identify malicious network activity from hours to minutes, developing centralized technical documentation for over 100 detections across 16 repositories and over 400,000 lines of Python/Django code
- Enabled scalable platform modernization by translating all legacy Python/SQL detection rules into self-contained JSON rules, identifying 15+ architectural gaps and collaborating with senior engineering leadership to prioritize migration solutions
- Improved software quality and release efficiency by automating network detection testing with Wireshark, Claude Code MCP, reducing QA execution time from hundreds of hours to 1 hour while identifying system defects in before deployment to production
- Drove team-wide adoption of AI-assisted testing by training 8 engineers on automated QA workflows, establishing reusable processes that supported long-term maintainability and continued use

Full Stack Software Engineer

August 2024 – May 2026

Stonehill College Digital Innovation Lab

North Easton, MA

- Improved user experience through responsive frontend design and performance optimization, reducing average homepage load times from over 10 seconds to 1 second for a digital literary publication
- Enhanced backend efficiency and system maintainability by restructuring over 200 content submissions and replacing outdated dependencies with custom PHP functionality, reducing technical debt and eliminating \$200 in annual licensing costs
- Streamlined content management by automating publishing workflows, reducing publication time from 20 minutes to 5 minutes per submission while delivering an intuitive, maintainable system that remains in production

Data Structures Learning Assistant

Aug. 2024 – Dec. 2024

Stonehill College

North Easton, MA

- Strengthened Java programming and problem-solving skills for 40 students through tutoring data structures and algorithms weekly, developing reusable exam preparation materials adopted by the professor for future semesters

PROJECTS

Holocron Qualitative Coding | Python, Django, React, PostgreSQL, Docker, Jenkins

Jan. 2026 – May 2026

- Led infrastructure and security for a 13-person capstone, building a Dockerized DigitalOcean/Jenkins CI/CD pipeline with 10 minute deployments and 10-15 minute local setup
- Integrated an OpenAI Codex PR reviewer, cutting developer feedback from days down to minutes while catching code quality issues before human review
- Hardened production infrastructure against thousands of brute-force attempts per minute, implementing geo-restrictions and Fail2ban policies that blocked 100+ malicious IPs with no breach

Recipe Manager | Python, Flask, JavaScript, JQuery, HTML, CSS

Feb. 2024 – May 2024

- Built a full-stack Flask, SQLite, and jQuery recipe platform with user authentication, public/private recipes, sharing, favorites, and an MVC-style architecture
- Developed real-time ingredient search that filters recipes as users type and returns the top 6 matches, helping users find meals based on available ingredients
